### **BERG MOOV Advanced kit**

Children like to create and to construct. Besides this they like to race on a cycle, scooter or go-cart or play with a crane or helicopter. Introducing the MOOV, BERG offers best of both worlds with this unique toy. MOOV is a unique full-size construction toy for children (boys and girls) aged 5 up to 12 years. The children can construct MOOV by themselves without the use of any tools or help from their parents. The wooden parts, rings, shafts and frames are multi functional. The spare parts in the wood are specially designed, so you can easily remove the rings from the shafts. It's a simple play concept with endless possibilities! And when the model is ready, the fun starts playing with it!

The MOOV Advanced kit contains more than 150 parts (incl. 120 rings). With these parts you can create at least 7 models (manuals included for these seven)!
